

Christopher Guzowski

Java Full-Stack Developer | Spring Boot, Angular & Applied AI

Brooklyn, NY | (646) 854-5750 | cguzowski.dev@gmail.com | [My Website](#) | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Java full-stack developer with 4 years of experience, including 3 years at TCS building enterprise Angular and Spring Boot applications, REST APIs, RBAC workflows, and SQL-backed services. I also worked at a startup where I wore many hats and gained firsthand experience with the technical and business challenges of building a company. Recent projects apply RAG and AI capabilities to full-stack products using Docker and AWS. Strong in secure API development, testing, and translating business requirements into maintainable software

CORE COMPETENCIES

Languages & Data: Java, TypeScript, JavaScript, Python, SQL, PostgreSQL

Frameworks & APIs: Spring Boot, Spring Security, Spring AI, Spring MVC, Angular, FastAPI, REST APIs, OAuth 2.0, JWT

AI Technologies: RAG, LangChain, embeddings, vector search, Pinecone, Hugging Face

Cloud & Infrastructure: AWS, Docker, Linux, Cloudflare

Development, CI/CD & Testing: Claude Code, Git, GitHub Actions, Maven, JUnit, Jasmine

PROFESSIONAL WORK EXPERIENCE

Tata Consultancy Services - Client: [Bullhorn](#)

Feb 2021 - Aug 2023

Full-Stack Developer | Remote

- Developed Angular and Spring Boot components for RBAC-enabled login, dashboards, and multistep ATS/CRM workflows on Bullhorn's recruiting platform, used by 8,000 agencies and 150,000 daily users.
- Built REST APIs with OAuth 2.0/JWT authentication and transactional SQL workflows supporting secure, high-volume business operations.
- Led a three-developer modernization effort that decomposed legacy applications into modular services, improving maintainability and scalability.
- Increased unit-test coverage for assigned modules to 91% using JUnit and Jasmine; reinforced CI/CD and code-review standards to improve release confidence.

INDEPENDENT ENGINEERING PROJECTS

Payment Incident Investigation Copilot

[Github](#)

Independent Full-Stack Developer | Self-Directed

- Built a payment-incident investigation platform using Spring Boot, Spring AI, Angular, PostgreSQL/pgvector, and MCP, correlating synthetic transaction data with runbooks and policies.
- Implemented hybrid RAG and MCP based tools for simulated payment, order, fraud, and observability systems, producing evidence-backed root-cause reports with source provenance.
- Designed human-in-the-loop review controls requiring operator approval while preserving evidence, model outputs, and decisions for auditability.

AI Portfolio & Financial Risk Analysis Platform

[Github](#)

Independent Full-Stack Developer | Self-Directed

- Architected and engineered a full-stack financial risk platform enabling users to evaluate portfolio allocations, simulate stress-test scenarios, and receive explainable insights.
- Built scalable Spring Boot REST microservices integrated with PostgreSQL, Docker containers, and external market APIs (Alpaca) for real-time asset pricing and risk calculation.
- Developed responsive and dynamic Angular visualizations for asset allocation, exposure metrics, and scenario analysis.

Team Full Stack Developer | Remote

- Collaborated on an automated travel itinerary solution using Angular, Python/FastAPI backend APIs, LangChain, Pinecone vector search, and AWS deployment.
- Engineered context-aware retrieval-augmented workflows that reduced manual planning time from hours to minutes while deploying robust containerized services in Docker.

Self-Hosted Web Infrastructure & IoT

[Github](#) | <https://cquzowski.com>

Infrastructure & Systems Engineer | Self-Directed

- Deployed and maintained an Angular website on Raspberry Pi infrastructure using Nginx, Cloudflare Tunnel and Docker, providing secure public access with monitored availability.

ADDITIONAL EXPERIENCE

Hercules Heat Treating Corp.

Feb 2020 - Mar 2021

Quality Assurance Specialist | Brooklyn, NY

- Executed relational database queries and Excel data analytics to support external quality compliance audits that concluded with zero deficiencies.
- Automated batch processing workflows and furnace tracking scripts, reducing turnaround time by 36% and improving operational efficiency.

Nanov Display Inc.

Jun, 2019 - Dec. 2019

Tech Support (Intern) | Brooklyn, NY

- Restructured website architecture, reducing load time by 32% and contributing to a 14% increase in user engagement.
- Supported product setup, assembly, installation, and deployment at client sites and trade expos.

EDUCATION & CERTIFICATIONS

Georgia Institute of Technology — M.S. in Computer Science, AI Specialization

Part-Time · Expected Dec 2029

NYC College of Technology (CUNY)

Bachelor of Technology (B.Tech.) in Computer Systems — Magna Cum Laude (GPA: 3.6/4.0) Jun, 2020

Associate in Applied Science (A.A.S.) in Computer Information Systems — Honors (GPA: 3.4/4.0) Jun, 2018

Certifications

- RAG and Agentic AI Professional - IBM (In Progress)
- Product Management Fundamentals - University System of Maryland Jun 2025
- FAA Part 107 Commercial Drone Pilot - Federal Aviation Administration May 2023
- Programming Using Java - Microsoft May 2019
